

RICE - Prioritization Method

This report uses the **RICE (Reach, Impact, Confidence, Effort)** prioritization framework to rank the corrective findings identified in the baseline report.

Each finding is evaluated using the following criteria:

- **Reach (1–5):** How many users are affected.
- **Impact (1–5):** The expected improvement to website performance.
- **Confidence (1–5):** The confidence in the analysis based on the available Lighthouse and networking data.
- **Effort (1–5):** The estimated implementation effort, where **1 = very easy** and **5 = very difficult**.

The final score is calculated using:

$$\text{RICE Score} = (\text{Reach} \times \text{Impact} \times \text{Confidence}) \div \text{Effort}$$

Higher scores indicate higher implementation priority.

Corrective Finding Prioritization

Finding	Reach	Impact	Confidence	Effort	RICE Score
Finding 1 – Excessive JavaScript Payload and Main-Thread Work	5	5	5	2	62.5
Finding 2 – Images Are Larger Than Necessary	5	4	5	2	50.0
Finding 3 – Excessive Number of Network Requests	5	4	4	3	26.7
Finding 4 – Initial Download Size Is High	5	4	5	3	33.3
Finding 5 – Browser Cache Lifetime Can Be Improved	4	3	5	2	30.0

Finding 6 – Overall Rendering Performance Remains Poor	5	5	5	4	31.3
---	---	---	---	---	-------------

Ranking

Priority	Finding	RICE Score
1	Excessive JavaScript Payload and Main-Thread Work	62.5
2	Images Are Larger Than Necessary	50.0
3	Initial Download Size Is High	33.3
4	Overall Rendering Performance Remains Poor	31.3
5	Browser Cache Lifetime Can Be Improved	30.0
6	Excessive Number of Network Requests	26.7
